

ASSIGNMENT 4

QUESTION 1

Discuss the GNS simulation environment.

SOLUTION

The GNS (G) simulation environment is a powerful tool designed to facilitate the simulation of various network protocols and systems. It provides a flexible framework that allows users to create, configure, and run simulations of network scenarios. The environment supports a wide range of protocols, including TCP/IP, UDP, and others, enabling users to model complex network behaviors.

QUESTION 2

Connect one PC with another PC as per diagram below.
